Limited Ingredient Diet

Enclosed are the results of the **Spectrum Labs Food Allergy Screen** conducted for your pet. The following results show that your animal exhibits sensitivity to the following major food groups:

Alfalfa Barley Carrots Corn Soybean
Peanut

Due to the fact pets cannot be treated for proteins (i.e. foods) the only remedy is avoidance. In an effort to assist you in choosing the appropriate food(s), we have compared your pet's sensitivities to our database containing the major specialty diets and their ingredients as supplied by the manufacturers. The following is a list of foods that should be tolerated by the attached pet.

Please be advised that this list is based solely on the results of the food panel requested. You and your Veterinarian should take into account any and all other special dietary and nutritional requires specific to your pet. We have also included additional contact information for all Food Manufacturers that meet your pets needs, should you need to contact them for purchasing information.

Sincerely,

Spectrum Labs

PS-Our database is kept as current as possible, however, as an extra precaution please check the ingredients on the label of each product for the presence of the foods listed above. *(Fats, oils or hydrolyzed portions of the above allergens, based on research conducted by the pet food industry, has been deemed to be ok to consume.)* **IN THE EVENT OF A FOOD RECALL**, please check each food against published list as provided by the USDA or FDA.
